Q: Converting a string to an Integer on Android

How do I convert a string into an integer? I have a textbox I have the user enter a number into: EditText et = (EditText) findViewById(R.id.entry1); String hello = et.getText().toString(); And the value is assigned to the string hello. I want to convert it to an integer so I can get the number they typed, it will be used later on in code. Is there a way to get the EditText to a integer? That would skip the middle man. If not, using to integer will be just fine.

Q: How do I convert a number to an Integer in Javascript?

I'd like to convert a number to an Integer in Javascript. Actually, I'd like to know how to do BOTH of the standard conversions: by truncating and by rounding. And efficiently, not via converting to a string and parsing. ...

Q: Converting an integer to a hexadecimal string in Ruby

Is there a built in way to convert an integer in Ruby into its hexadecimal equivalent? Something like the opposite of String#i. "0A" to 10, 16 to 10. (Like perhaps "0A" to 10, 16 to 10. I know how to not my own, but it's probably more efficient to use a built in Ruby function.
